**Optional for Patio/Outdoor Installations*

CHIMNEY POTS FOR PATIO FIREPLACES: Chimney pots will fail/crack because of thermal shock. It is recommended that chimney pots be at least 6' above the smoke dome. However, if quick hot fires (ie. trash and paper) are made, there may still be risk to the chimney pot even at this elevation. Sandkuhl Clay Works, Inc. will not be responsible for chimney pot failure/cracking due to exposure to thermal shock.
